[Add Product Attribute](#)

To add a roll end product we understand that you are aware of the total price for the item not the sqm price, therefore you just need to add the product as listed above.

You just need to leave the total price at 0.

On the invoicing screen later explained you will see that you enter the customers length and width of the room which automatically calculates the total sqm required however you can then just input the total price and it adds to the rest of the invoice opposed to then multiplying the unit price by the customers total sqm required.

Should you wish to calculate roll end products the same for roll items or carpets, then you would just simply add the roll end as a carpet or roll item and the calculation will be correct.
